65W, High-Frequency, USB Type-C PD Adapter Evaluation Board

DESCRIPTION

The EVX2003-Y-00D is an evaluation board designed for the MPX2003, a 65W USB Type-C power delivery 3.0 (PD 3.0) adapter. The board is designed in a very small form factor with a high power density. Its electrical specifications are well-suited for cellphone and computer power adapters. The board provides very low, no-load power consumption (<40mW), and its high overall efficiency meets DOE Level VI and CoC Tier2.

The MPX2003 is an all-in-one flyback controller solution. It integrates a primary driving circuit, secondary controller, synchronous rectification driver, and safety-compliant feedback in one chip. The device offers the benefits of both primary-side regulation (PSR) and secondary-side regulation (SSR).

No feedback circuit is required, as a synchronous rectifier (SR) can be matched with the driving signal of the primary-side MOSFET. With this feature, the SR can operate safely in

continuous conduction mode (CCM), which helps increase overall efficiency and provides the design more flexibility.

The MPX2003 adopts novel quasi-resonant mode switching when it runs in discontinuous conduction mode (DCM). Due to this feature, the power supply has improved efficiency. Under very light loads, the controller enters burst mode to achieve very low standby power consumption. The MPX2003 offers frequency jittering to help dissipate the energy generated by conducted noise.

The EVX2003-Y-00D evaluation board provides a reference design for a universal offline isolated power supply with a 20V/3.25A, 15V/3A, 12V/3A, 9V/3A, or 5V/3A output. This datasheet contains the complete specification of the power supply, a detailed circuit diagram, the entire bill of materials required to build the power supply, a drawing of the transformers, and performance testing.

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^{\circ}\text{C}$, unless otherwise noted.

Parameters	Conditions	Value
AC input voltage (V_{IN})		90V _{AC} to 264V _{AC}
AC input frequency		47Hz to 63Hz
Output voltage (V_{OUT}) / output current (I_{OUT})	Power delivery 3.0 (PD 3.0)	20V/3.25A, 15V/3A, 12V/3A, 9V/3A, 5V/3A
Maximum efficiency	$V_{IN} = 230V_{AC}$, $V_{OUT} = 20V$, $I_{OUT} = 3.25A$	93.4%
No-load power consumption	$V_{IN} = 264V_{AC}$	<40mW

QUICK START GUIDE

1. Preset the AC input voltage (V_{AC}) between 90V_{AC} and 264V_{AC}.
2. Turn the AC power supply off.
3. Connect the load to the USB Type-C connector.
4. Connect the power supply's line and neutral terminals to the AC input.
5. Turn the power supply on. The board should start up automatically.
