Presentation

An easy solution for OEM's, panel builders, contractors and system integrators who have a need for motor control, resistive load switching, and isolation applications.

For use on conveyors, packaging, pumps, compressors, HVAC, refrigeration, furnace applications, and more!

Easy TeSys contactors are ideal for these types of applications with power ratings and an operational life of approximately 1 million electrical operations.

UL/CSA approved rated up to 32 amps, 20 HP/480VAC and 25 HP/600VAC.

They are suitable for the utilisation categories specified in standard IEC 60947:

- **AC-1:** non inductive loads or slightly inductive loads, resistance furnaces
- **AC-3:** squirrel cage motors. Motor starting and breaking whilst running.
Example: standard squirrel cage motors, pumps and fans.
- **AC-4:** squirrel cage or slip ring motors. Applications with reverse current braking and inching.
- **AC-8a:** control of sealed refrigeration compressor motors with manual reset of overload trips.
- **AC-8b:** control of sealed refrigeration compressor motors with automatic reset of overload trips.

	500 ms	A	120
	100 ms	A	140
Insulation resistance		mΩ	> 10
Mechanical durability	In millions of operating cycles		30

Use in Category AC-1 ($U_e \leq 440$ V)

Control of resistive circuits ($\cos \varphi \geq 0.95$).

The current broken (I_c) in category AC-1 is equal to the current (I_e) normally drawn by the load.

Example:

$U_e = 400$ V - $I_e = 25$ A - $\theta \leq 104^\circ\text{F}$ (40°C) - $I_c = 25$ A

1.5 million operating cycles required

The above selection curves show the contactor rating needed: DPE 25

Use in Category AC-3 ($U_e \leq 440$ V)

Control of 3-phase asynchronous squirrel cage motors with breaking whilst running. The current broken (I_c) in category AC-3 is equal to the rated operational current of the motor.

Example:

Asynchronous motor with $P = 5.5$ kW - $U_e = 400$ V - $I_e = 11$ A - $I_c = I_e = 11$ A

or asynchronous motor with $P = 5.5$ kW - $U_e = 415$ V - $I_e = 11$ A - $I_c = I_e = 11$ A

2 million operating cycles required

The above selection curves show the contactor rating needed: DPE 18

Use in Category AC-4 ($U_e \leq 440 \text{ V}$)

Control of 3-phase
asynchronous squirrel cage
motors with breaking whilst
motor stalled.
The current broken in AC-4 is
equal to $6 \times I_e$.
(I_e = rated operational
current of the motor).

Example:

Asynchronous motor with $P = 5.5 \text{ kW}$ - $U_e = 400 \text{ V}$ - $I_e = 11 \text{ A}$
or asynchronous motor with $P = 5.5 \text{ kW}$ - $U_e = 415 \text{ V}$ - $I_e = 11 \text{ A}$
 $I_c = 6 \times I_e = 66 \text{ A}$

300 000 operating cycles required.

The above selection curves show the contactor rating needed: DPE 32

Presentation

Easy TeSys thermal overload relays are designed to protect a.c. circuits and motors against:

- overloads
- phase failure
- long starting time
- prolonged stalled rotor condition.

The thermal relay permanently controls the current driven by the motor. When this current exceeds the setting, its auxiliary contacts will change state, causing the motor to stop.

Description

- 1 Adjustment dial I_r
- 2 Test button
Operation of the Test button allows:
 - checking of control circuit wiring
 - simulation of relay tripping (actuates both the N/O and N/C contacts)
- 3 Stop button. Actuates the N/C contact; does not affect the N/O contact
- 4 Reset button
- 5 Trip indicator
- 6 Setting locked by sealing the cover
- 7 Selector for manual or automatic reset

Easy TeSys overload relays are supplied with the selector in the manual position, protected by a cover.

Deliberate action is required to move it to the automatic position.

Easy TeSys thermal overload relays

3-pole thermal overload relays

Direct connection to Easy TeSys contactors

Differential Thermal Overload Relays

for Use with Fuses or Circuit Breakers

- Compensated relays with manual or automatic reset
- with relay trip indicator
- for a.c

Presentation

GP2E

Easy TeSys includes 3-pole thermal-magnetic circuit breakers conforming to IEC 60947-2 and IEC 60947-4-1.

These devices also conform to UL 60947-4-1 as manual motor controllers and are suitable for the motor disconnect.

Easy TeSys manual motor controllers are designed to control and protect motors.

Connection

These circuit breakers are designed for connection by screw clamp terminals. This technique ensures secure, permanent and durable clamping that is resistant to harsh environments, vibration and impact and is even more effective when conductors without cable ends are used. Each connection can take two independent conductors.

Push button control

Energisation is controlled manually by operating the Start button "I" 1. De-energisation is controlled manually by operating the Stop button "O" 2, or automatically by the thermal-magnetic protection elements or by a voltage trip attachment.

Protection of motors

Motor protection is provided by the thermal-magnetic protection elements incorporated in the motor circuit breaker.

As per IEC 60947-4-1 the magnetic elements (short-circuit protection) have a non-adjustable tripping threshold, which is equal to about 13 times the maximum setting current of the thermal trips.

The thermal elements (overload protection) include automatic compensation for ambient temperature variations.

The rated operational current of the motor is displayed by means of a graduated knob 3.

All live parts are protected against direct finger contact.

Easy TeSys manual motor controllers are easily mounted on din rail or directly to the panel.

Manual Motor Controllers

Push Button Control
