

XM126 IoT Module
Datasheet v1.0

Abstract

The XM126 is a reference module with optimized formfactor that can be used to support customer in their own design for commercial use, for evaluation and development purpose.

The XM126 is built around the A121 Pulsed Coherent Radar (PCR) sensor and the nRF52840 Bluetooth® 5 SoC (System on Chip) from Nordic Semiconductor and features an integrated antenna for Bluetooth connectivity.

The XM126 can be used as a stand-alone module where customer can embed their application on top of the Acconeer RSS (Radar System Software).

Figure 1. XM126 Top view (left) and XM126 bottom view (right).

v1.0	Released version

This document applies to the following product:

Product name	Part number
XM126	XM126

2 Functional description

2.1 Overview

The XM126 comes with Nordic nRF52840 SoC and A121 Pulsed Coherent Radar (PCR) sensor, see ref [1]. The Nordic nRF52840 SoC supports Bluetooth 5.4 BLE, Bluetooth Mesh, Thread, Zigbee, 802.15.4, ANT and 2.4 GHz proprietary stacks.

The XM126 is delivered with a bootloader enabling customer to download Acconeer RSS software including SDK (Software Development Kit) for stand-alone usage where customer can embed their own application on top of Acconeer RSS software. Acconeer RSS software provides API to set A121 sensor configuration and to retrieve radar service and detector data.

2.2 Product features

The XM126 is an IoT module based on Acconeer A121 pulsed coherent radar (PCR) and the Nordic nRF52840 SoC.

XM126 features:

- The A121 60 GHz Pulsed Coherent radar (PCR) with integrated baseband, RF front-end and Antenna in Package (AiP).
- Low power connected radar module.
- The nRF52840 protocol stack support for Bluetooth 5.4 supporting BLE, Bluetooth mesh, Thread, Zigbee, 802.15.4, ANT and 2.4 GHz proprietary stacks and is built around the 64 MHz ARM® Cortex™-M4 CPU with 256 KB SRAM and 1 MB Flash.
- Integrated 2.4 GHz antenna.
- Optional NFC antenna support for quick Bluetooth pairing via the PCB test points.
- Optimized circular form factor with a diameter of 33 mm.
- Wide single supply operating voltage range 1.8 V to 5.5 V.
- Operating temperature -40° to 85°C.
- External I/F support - SPI, UART, I2C, GPIO, Reset.
- SWD/JTAG for SW flash and debug.

The XM126 can be used for accurate distance measurement, tank level measurement, surface velocity measurement, waste bin level measurement, parking space occupancy, human presence detection, speed measurement, breathing monitoring, gesture control, inventory monitoring and vibration measurement:

- Measures absolute distance up to 20 m, dependent on object, object size, shape, and dielectric properties.
- High precision distance measurements with mm accuracy and high update rate.
- High precision relative measurement with μm accuracy.
- Human presence detection with high accuracy and the possibility to define multiple detection zones.

Easy integration:

- XM126 can be integrated behind plastic or glass without any need for a physical aperture. See ref [5] *User guide – Sensor Integration Electromagnetic Scattering* for more information.

2.3 Block diagram

Figure 2.1. XM126 block diagram.

The XM126 block diagram shows the A121 60 GHz PCR radar connected to the nRF52840 microcontroller. The module provides a pin connector where the MCU external I/F are accessible including single voltage supply.

2.4 Module board connector and pin description

The board-to-board connector provides the external interface to the module. Figure 2.2 shows the connector footprint and Table 2.1 describes each signal. All GPIOs on XM126 have an operating voltage of 1.8V.

Figure 2.2. XM126 J2 connector footprint.

Pin Number	Signal	Description	nRF52840* pin
1	GPIO		P0.23
2	GND	Ground	-
3	GND	Ground	-
4	VIN	1.8-5.5 V external power supply. Pin 4 and Pin 6 are interconnected.	-
5	GPIO		P0.21
6	VIN	1.8-5.5 V external power supply. Pin 4 and Pin 6 are interconnected.	-
7	GND	Ground	-
8	GND	Ground	-
9	GPIO		P0.24
10	GPIO	Configurable as Analog Input.	P0.04
11	GND	Ground	-
12	GPIO	Configurable as JTAG Trace signal.	P0.11 TRACEDATA2
13	GPIO		P0.22
14	GPIO	Configurable as JTAG Trace signal.	P0.12 TRACEDATA1
15	GND	Ground	-
16	VDD	Regulated 1.8 V output voltage.	-
17	GPIO/UART_RX	Default configuration in Acconeer exploration server and SDK is UART. Could also be used as miscellaneous GPIO.	P0.06
18	GPIO, nRESET	nRF52840 reset pin.	P0.18 nRESET

19	GPIO/UART_TX	Default configuration in Acconeer exploration server and SDK is UART. Could also be used as miscellaneous GPIO.	P0.16
20	SWDIO	SWD interface for flash and debug.	SWDIO
21	GND	Ground	-
22	GPIO, SWO	SWD interface for flash and debug. Configurable as JTAG Trace signal.	P1.00 TRACEDATA0
23	GPIO	Configurable as JTAG Trace signal.	P0.07 TRACECLK
24	GND	Ground	-
25	GPIO	Configurable as JTAG Trace signal.	P1.09 TRACEDATA3
26	SWDCLK	SWD interface for flash and debug.	SWDCLK
27	GPIO/UART_RTS	Default configuration in Acconeer Exploration Server SW is UART. Could also be used as miscellaneous GPIO.	P0.20
28	GND	Ground	-
29	GPIO/UART_CTS	Default configuration in Acconeer Exploration Server SW is UART. Could also be used as miscellaneous GPIO.	P0.19
30	GPIO, DFU	Device Firmware Upgrade. Set low during reset to enter bootloader mode. Could also be used as miscellaneous GPIO.	P0.25

Table 2.1. J2 connector pinout.

2.5 Not mounted battery connector support

Not mounted battery connector (Reference Designator J3) supported on XM126 PCB. See chapter 5 schematics for further information. Example of compatible battery connectors:

- Vertical Amphenol 10114828-10102LF
- Horizontal Amphenol 10114828-1010LF
- Horizontal Molex 532617002

2.6 Software options

The XM126 module can be used as stand-alone module where the module operates as an independent system. The application is customized to a specific use case by the customer and runs on the embedded MCU. The customer application is accessing the RSS API.

Using the XM126 as stand-alone module Acconeer offers SDK that provides RSS, hardware abstraction layer, device drivers and build system. Based on SDK it is possible for the customer to develop their own application. Both RSS and applications runs on the embedded MCU.

2.7 MAC addresses

The XM126 module comes with a Static Random Bluetooth Address provided by the Nordic nRF52840 SoC. This address is assigned randomly during manufacturing. This static address can be used for evaluation.

3 Interfaces

3.1 Module supply input

The XM126 support external single power supply for battery power applications, see table 4.2 recommended operating conditions.

Note that supply voltage conditions (E.g. slew rate) need to be taken into consideration according to nRF52840 datasheet, ref [4].

3.2 System functions

Module RESET is supported by activating NRST pin (active low).

3.3 Serial interfaces

The XM126 nRF52840 GPIO pins can be configured to support up to two UART, up to four SPI master or three SPI slave and up to two I2C compatible 2-wire master/slave external serial interfaces. See table 2.1 for HW configuration. See also nRF52840 datasheet, ref [4] for further information.

3.4 Digital I/O interfaces

The XM126 module support General Purpose IOs (GPIOs) that operates at 1.8V, 16 GPIOs are available. The GPIO pins are configurable for different functions, only the debug and RESET pins are fixed to specific GPIOs. See table 2.1 for HW configuration. See also nRF52840 datasheet, ref [4] for further information.

3.5 Analog I/O interfaces

The XM126 module support one analog input (pin 10 on XM126 connector J2) and up to four individual PWM outputs which can be assigned to any of the GPIO pins. See table 2.1 for HW configuration.

3.6 Module reset

The XM126 has an external reset option (Pin 18 on XM126 connector J2) that can be configured as a GPIO or RESET input.

3.7 Debug interface

The XM126 has 7 debug pins, SWDIO, SWDCLK and Trace signals. TRACE signals reuse GPIO pins. The debug pins have an operating voltage of 1.8V. See table 2.1 for HW configuration.

4 Electrical specifications

4.1 Absolute maximum ratings

The below table shows the XM126 absolute maximum ratings over operating temperature range, unless otherwise noted:

Parameter	Description	Min.	Max.	Unit
V _{IN}	power supply	-0.3	6.0	V
I/O	Voltage on I/O pins	-0.3	2.1	V
T _{OP}	Operating temperature range	-40	85	°C
T _{STG}	High temperature storage		125	°C

Table 4.1. Absolute maximum ratings.

Stresses beyond those listed in table 5.1 may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these conditions or at any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods of time may affect device reliability.

4.2 Recommended operating conditions

The below table shows the XM126 recommended operating conditions:

Parameter	Min.	Typ.	Max.	Unit
V _{IN} , operating power supply voltage ¹⁾	1.8		5.5	V
I/O operating range	0		1.8	V
Operating temperature ¹⁾	-40		85	°C

Table 4.2. Recommended operating conditions.

¹⁾ Minimum battery voltage depends on battery internal resistance and temperature.

4.3 Power consumption summary

The below table summarizes the XM126 power consumption, maximum current ratings and average current ratings at power terminal at $T_A = 25^\circ\text{C}$ and 2.0 V/3.0 V supply:

Parameter	Min.	Typ.	Max.	Unit
Average power consumption, 2.0 V supply, 0.1 Hz update rate		1.67 (1)		mW
Average power consumption, 3.0 V supply, 0.1 Hz update rate		1.68 (1)		mW
Average power consumption, 2.0 V supply, 1 Hz update rate		16.6 (1)		mW
Average power consumption, 3.0 V supply, 1 Hz update rate		16.7 (1)		mW
Average power consumption, 2.0 V supply, 2 Hz update rate		33.4 (1)		mW
Average power consumption, 3.0 V supply, 2 Hz update rate		33.5 (1)		mW
Average power consumption, 2.0 V supply, 1 Hz update rate		0.22 (2)		mW
Average power consumption, 3.0 V supply, 1 Hz update rate		0.22 (2)		mW
Average power consumption, 2.0 V supply, 2 Hz update rate		0.40 (2)		mW
Average power consumption, 3.0 V supply, 2 Hz update rate		0.41 (2)		mW
Idle current, 3.0V supply		4.35 (3)		μA

Table 4.3. Average power dissipation ratings at power terminal.

¹ Configuration according to the 'Medium Tank'-preset in the Tank Level Reference Application. Bluetooth advertisement according to given update rate.

² Configuration according to the 'Low Power Wakeup'-preset in the Presence Detector Example Application. Bluetooth advertisement according to given update rate.

³ Sensor is disabled and nRF52840 is in sleep mode (System ON) with full RAM retention and wake-up on RTC enabled.

Figure 4.1. Current profile, Low Power Wakeup, 2.0V supply.

4.4 RF specification

The below table shows the XM126 A121 PCR RF specification:

Parameter	Min.	Typ.	Max.	Unit
Operating frequency range	57		64	GHz
EIRP (Equivalent Isotropically Radiated Power)		11		dBm
TX HPBW (Half Power Beam Width), elevation plane ⁽¹⁾	42	53	64	degrees
TX HPBW (Half Power Beam Width), horizontal plane ⁽¹⁾	52	65	78	degrees

Table 4.4. XM126 RF specification.

⁽¹⁾Based on simulation

The XM126 support Bluetooth v5.4 including BLE, mesh, long range and advertising extensions.

The below table shows the XM126 Bluetooth radio performance:

Parameter	Min.	Typ.	Max.	Unit
Frequency (40 channels)	2.4		2.48	GHz
Data rate		2		Mbps
Total radiated power (TRP)		5.5 ⁽¹⁾		dBm

Table 4.5. XM126 Bluetooth radio performance.

7 Regulatory Approval

To be noted is that some regulatory specifications also specify usage of the module, so users of the module must check regulatory requirements for their own use case and determine if the regulatory approvals described below are sufficient.

7.1 ETSI

The XM126 pending compliance with EU safety, health and environmental requirements (CE marked), according to directive 2014/53/EU.

7.2 FCC Approval

The XM126 pending BLE limited modular approval granted by FCC.
